

CLAIMS

Here are what I claim for 10/699,594 in my language

1. A stowable pelvis enclosing assembly made from fire resistant materials that will attach to a Self Contained Breathing Apparatus (SCBA) harness and convert that harness to a Class III harness with a storage pouch for when not in use.
2. The harness of claim 1 where the components are: an adjustable crotch strap, straps for under hips in a Y shape, attachment devices for the SCBA rear waist belt, a carabiner to attach the front crotch strap to the SCBA front waist band, and a attachment point.
3. The harness of claim 1 , further comprising a fire resistant rappel line assembly which has: rappel line, pre-wrapped descender, 2- carabiners one on each end of the line, stowing bag, and attachment point.
4. The stowable pouch/bag in 1 and 3 are attached to the SCBA waist belt.
5. The pre-wrapped descender in 3 can be attached to the front carabiner in 2 when the harness is deployed and attached.
6. The anchor carabiner on the rappel line can be attached to an anchor and the Firefigher can rappel letting the rappel line feed out through their hand from the pouch in 3 with braking control by their grip.
7. The line assembly in 3 and 6 further has an attachment carabiner on the other end of the line that is connected to the stowable pouch at an attachment point, which would keep the rappeler from rappelling off the end of the line.
8. The harness of 1 and the rappel line assembly of 3 are both stowed in the stowing bags of 4 when not in use virtually unnoticeable.

A handwritten signature in black ink, appearing to read "Dale Peay-Jordan".
